Table 1. Budget-specific configuration results. Internal rows share a checkpoint, hardware and a 10,000-item evaluation set.

Configuration	Success % ↑	Error % ↓	P95 latency ms ↓
16k-token budget			
Baseline	72.3	4.3	181.4
Cache	72.3	4.2	**139.7**
Router	**74.0**	4.1	147.2
Expert	**74.0**	**4.0**	*NR*
32k-token budget			
Baseline	75.1	3.7	245.8
Router	**76.6**	**3.4**	**220.2**
Expert	*OOM*	*OOM*	*OOM*
External reference (different harness)			
External reference	80.0	2.0	88.0

Synthetic data. P95 is a within-run latency quantile; no replication, so no intervals. The external reference uses a different harness and is not ranked. Bold: best within each internal budget (ties share the mark). NR = not reported. OOM = out of memory (an outcome, not a score of zero).
