Table 5. Configuration results at two token budgets. Among the internal configurations, Router leads or ties on success at both budgets and is the fastest at 32k; Expert does not fit in memory at 32k.

Configuration	Success % ↑	Error % ↓	P95 latency ms ↓
16k-token budget			
Baseline	72.3	4.3	181.4
Cache	72.3	4.2	**139.7**
Router	**74.0**	4.1	147.2
Expert	**74.0**	**4.0**	–
32k-token budget			
Baseline	75.1	3.7	245.8
Router	**76.6**	**3.4**	**220.2**
Expert	*OOM*	*OOM*	*OOM*
External reference†	80.0	2.0	88.0

Synthetic data. One run each on the same checkpoint and 10,000 items. † Different harness: context only, not ranked. Bold: best within a budget; ties share it. – = not reported. OOM = out of memory (an outcome, not a zero).
