Table 6. Memory systems for agents. Plugin memory is the only system that combines all three mechanisms with all three memory types, and has the highest success at 1.3× the cost of vector retrieval.

Method	Mechanism			Memory type			Results	
	Structuring	Retrieval	Reasoning	Episodic	Semantic	Procedural	Success % ↑	Cost rel. ↓
Task-agnostic memory								
Vector retrieval	✗	✓	✗	✓	✗	✗	61.2	1.0×
Summary memory	✓	✗	✗	✓	✓	✗	63.5*	1.4×
Graph memory	✓	✓	~	✓	✓	✗	66.8	3.2×†
Task-specific memory								
Skill library	✓	✗	✓	✗	✗	✓	67.4*	2.6×
Workflow memory	✓	✓	✗	✗	✗	✓	68.1	1.9×
Ours · task-agnostic								
Plugin memory	✓	✓	✓	✓	✓	✓	**71.9**	1.3×

Synthetic data. Cost is relative to vector retrieval. Rows are ordered by success within each category. Bold: highest success. Shaded: the proposed system. * reported by the original authors. † measured on a 500-task subset. ✓ supported, ✗ not supported, ~ partial.
