Table 7. Single-turn versus multi-turn task success. Six models on four tasks (%), ordered by mean single-turn success. Every model loses most on Code, SQL and Math once the instruction arrives over several turns; Summary barely moves.

	Single-turn (reference)				Multi-turn				
Model	**Code**	**SQL**	**Math**	**Summary**	**Code**	**SQL**	**Math**	**Summary**	**Retained** % of single
Model F	**88.4**	93.6	**91.7**	42.1	61.3	65.0	67.9	40.6	74
Model D	78.0	**93.9**	85.4	**45.6**	**65.6**	58.3	**70.0**	**46.2**	**79**
Model E	86.4	92.0	81.6	40.2	53.0	60.2	63.1	39.8	72
Model B	75.9	89.3	88.1	35.9	50.3	52.4	58.7	33.8	67
Model C	72.0	91.1	**91.7**	34.1	51.6	**71.0**	61.5	31.4	75
Model A	44.8	85.0	73.9	29.8	31.5	55.9	47.1	28.6	70

Synthetic data. Higher is better in every column. Retained: the four multi-turn scores summed, as a share of the four single-turn scores. Bold: best in each column. Red shading: points lost against the same model's single-turn score, linear on 0–40; a white multi-turn cell lost nothing.
